Professional Summary

Computer Science student specializing in **backend engineering** with **Golang**. Experienced in designing **RESTful APIs**, implementing **layered architecture**, and building secure authentication systems. Possesses a strong foundational grasp of **Data Structures and Algorithms**, with a focus on writing clean, scalable code.

Education

Lakshmi Narain College of Technology

Bachelor of Technology in Computer Science and Engineering | CGPA: 8.0

Sep. 2024 – Present

Bhopal, M.P.

Technical Skills

Languages: Go (Golang), C++, SQL (PostgreSQL), TypeScript, JavaScript, Python

Backend & Tools: Echo Framework, RESTful APIs, JWT, Goose, Git, Linux

Frontend/Mobile: React, React Native, Expo, Tailwind CSS

Core Concepts: Data Structures & Algorithms, Object-Oriented Programming, Layered Architecture, Database Management

Projects

FilesGo | Go, cURL | [GitHub](#)

Aug. 2026

- Built a lightweight **CLI utility** in **Go** to facilitate peer-to-peer file transfers between local network devices.
- Leveraged **Go standard library** for cross-platform binary compilation and networking without external dependencies.
- Integrated **cURL** protocols to manage multi-part data transmission and network request error handling.

YABS (Yet Another Blog Site) | Go, Echo, PostgreSQL, JWT | [GitHub](#)

Nov. 2025

- Developed a scalable **RESTful API** using the **Echo framework**, implementing custom middleware for logging and user session security.
- Engineered secure authentication flows utilizing **JWT-based** authorization, token validation, and password encryption.
- Architected a decoupled backend using a **repository pattern** to separate business logic from the **PostgreSQL** persistence layer.
- Managed database schemas and version-controlled migrations using **Goose** to ensure consistent deployments across environments.

UNotes | React Native, Expo, AsyncStorage | [GitHub](#)

June 2025

- Engineered a cross-platform mobile application using **React Native** and **Expo** for personal financial tracking and management.
- Integrated **AsyncStorage** for low-latency in-device data persistence, enabling offline functionality and swift retrieval.
- Designed a modular UI architecture using custom **React hooks** and components to handle state transitions and input validation.
- Optimized list rendering algorithms to maintain high frame rates and prevent rendering bottlenecks during data filtering.
